POL-09 Access and secrets

Break-glass access

Production database access is off by default. In an incident, request it with vaultctl breakglass --reason <ticket>; it lasts one hour and the security team is told at once.

Secret rotation

Service secrets rotate every 90 days on their own. A secret that was pasted anywhere outside the vault is rotated the same day.

Tickets and chat

Never paste a secret, a token or a card number into a ticket or Slack. Link to the vault path instead.

Leaving the company

When someone leaves, their access is removed on their last day and every shared secret they could read is rotated within a week.
