RB-108 Nightly reconciliation

Job

recon runs at 02:00 UTC and matches every ledger entry from the day before to the bank's settlement file. It writes a mismatch report to the finance bucket.

RECON-MISMATCH-17

The bank's file has a payment the ledger does not. This is almost always a late settlement event still in Kafka. Wait for the consumer to catch up, then rerun.

RECON-MISMATCH-22

The ledger has a payment the bank's file does not. Do not delete the ledger entry. Send the payment id to finance in #finance-ops; they raise it with the bank.

Rerun

Rerun a day with reconctl rerun --date YYYY-MM-DD. A rerun replaces that day's report; it never changes the ledger.

Bank file late

If the bank's settlement file has not arrived by 04:00 UTC, the job waits and retries every 30 minutes until 10:00 UTC, then alerts finance.
