RB-103 ledger-pg failover

When to fail over

Fail over only when the primary is down or will not accept writes for more than 3 minutes. A slow primary is not a reason to fail over.

Check replica lag

Before promoting, check the candidate's lag on the replica: SELECT now() - pg_last_xact_replay_timestamp(); Promote only when the lag is below 5 seconds. A replica further behind loses committed ledger entries.

Fail over

Run patronictl failover ledger-pg --candidate ledger-pg-2 from the bastion. Patroni moves the leader and updates the service endpoint.

After the failover

Reload the connection pool with pgbouncer RELOAD on both pool hosts, then confirm ledger-writer errors drop. Open a ticket to rebuild the old primary as a replica.
